***Reasons for Allowance***

1. The following is an examiner's statement of reasons for allowance: The present invention is directed to a method of assembling a double-stranded polynucleotide comprising the steps of:

a) selecting a partially double-stranded initiating oligonucleotide, wherein the initiating oligonucleotide comprises a at least one overhang;

b) contacting the partially double-stranded initiating oligonucleotide with a next most terminal double-stranded oligonucleotide, wherein the next most terminal double-stranded initiating oligonucleotide is contiguous with the initiating oligonucleotide and comprises at least one overhang, and wherein at least one overhang of the next most terminal double-stranded oligonucleotide is complementary to at least one overhang of the initiating oligonucleotide ;

c) repeating step (b) to sequentially add the next most terminal double-stranded oligonucleotide to the extended initiating oligonucleotide, whereby the double-stranded oligonucleotide is synthesized.

Although Beattie et al., (Biotechnology and Applied Biochemistry, (1988), Vol. 10, pages 510-521). teaches a method of assembling a double-stranded polynucleotide, Beattie et al. does not teach the sequential addition of a next most terminal double-stranded oligonucleotide of step (b).

In view of the absence of either teaching or suggestion of such a method of assembling a double-stranded polynucleotide comprising the steps of:

Art Unit: 1634

- a) selecting a partially double-stranded initiating oligonucleotide, wherein the initiating oligonucleotide comprises a at least one overhang;
- b) contacting the partially double-stranded initiating oligonucleotide with a next most terminal double-stranded oligonucleotide, wherein the next most terminal double-stranded initiating oligonucleotide is contiguous with the initiating oligonucleotide and comprises at least one overhang, and wherein at least one overhang of the next most terminal double-stranded oligonucleotide is complementary to at least one overhang of the initiating oligonucleotide ;
- c) repeating step (b) to sequentially add the next most terminal double-stranded oligonucleotide to the extended initiating oligonucleotide, whereby the double-stranded oligonucleotide is synthesized., the present invention is novel and non-obvious.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***

2. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Arun Chakrabarti , Ph.D. , whose telephone number is (703) 306-5818. The examiner can normally be reached on 7:00 AM-4:30 PM from Monday to Friday. If attempts to reach the examiner by telephone are unsuccessful the examiner's
